ABOUT ME

Recent computer science graduate with expertise in **systems programming**, **low-level software development**, and **machine learning**. Skilled in **C**, **C++**, **Java**, and **Python**, with experience in **scalable database design**, **FUSE-based file systems**, and **deep learning models**. Experienced in **quality assurance testing** and collaborating in **Agile AI** development environments.

EDUCATION

University of Toronto, St. George

Honors Bachelor of Science, Computer Science

Toronto, ON

Graduated: June 2025

TECHNICAL SKILLS AND CERTIFICATIONS

Languages: Java, Python, C, C++, SQL, HTML, CSS, JavaScript, GDScript/C#, Assembly, LaTeX, XML.

Frameworks: TensorFlow, Keras, PyTorch, Pytest, Django, Flask, React, Node.js, Vite, Vue.

Libraries and Tools: Git, Jira, Sklearn, SciPy, pandas, pickle, boto3, psycpg2, nltk, Fusion 360, Gazebo, ROS, RViz.

Certifications: Coursera Deep Learning Specialization (Neural Networks, CNNs, Sequence Models, etc.).

EXPERIENCE

Python Developer Intern | *Python, Quality Assurance Testing, NLP, Prompt Engineering*

May. 2025 – Present

ContractPodAI

Toronto, ON

- **Performed quality assurance testing** on Leah, a proprietary AI assistant for legal contract redlining, **reporting 20+ bugs** to improve **model accuracy and reliability** in high-stakes legal workflows.
- **Conducted user acceptance testing (UAT)** and prompt evaluation to ensure GenAI outputs aligned with **legal standards** and **real-world user expectations**.
- Collaborated with **5+ engineers** via **Jira tickets** and **Git branches**, accelerating model debugging and feature validation within a **2-week Agile sprint cycle**.
- Gained hands-on experience with **prompt engineering**, **large language model (LLM) testing**, and **legal tech systems**, directly contributing to real-time product improvement.

Lead Software Developer | *HTML, CSS, JavaScript, Python, TensorFlow, Keras*

May. 2024 – May. 2025

InkTank

Toronto, ON

- Built **mockups and design previews** for a 3D tattoo visualization platform powered by **generative AI**, aiding **early-stage prototyping** and stakeholder feedback.

Software/Robotics Intern | *XML, Fusion 360, ROS 2, Gazebo*

Jun. 2024 – Aug. 2024

Evodyne Robotics Academy

Mountain View, CA

- Recreated the Evodog robotic model entirely in code using **CAD modeling**, mastering new tools such as **ROS 2** and **Gazebo** within **5 weeks** to enable virtual simulations that reduced resource usage by over **50%** and saved **100+** hours of testing time through accelerated design iterations.
- Applied **3D meshes** and physics simulations, improving design accuracy by **25%** and enabling quicker iterations.
- Utilized **ROS 2** and **Ignition Gazebo** for realistic simulations, accelerating testing and iterative adjustments to the robotic model.

PROJECTS

Key-Value Database System API | *C++, Python, SQL*

September 2024 – December 2024

- Collaborated in a team of 3 to design and implement a scalable key-value database system, incorporating **Memtables**, **SSTs**, **Static B+-Trees**, **Buffer Pools**, **LSM-Trees**, and **Bloom Filters**, emphasizing **memory management** and **performance optimization** to achieve a **30% improvement in query efficiency** and support datasets beyond **10GB**.
- Developed a **user-friendly API** for seamless **interaction with the database via terminal commands**, supporting essential operations like **put**, **get**, **scan**, and **delete**.
- Conducted comprehensive **testing and performance benchmarks** on datasets of **over 100,000 key-value pairs**, demonstrating **sub-millisecond query latencies** and co-authored a **technical report** detailing the system's architecture, implementation, and instructions for deployment.

mhapy Sentiment Analysis Model | *Python, Flask, nltk, TensorFlow, Keras*

September 2023 – December 2023

- Developed a sentiment analysis API for mhapy using **TensorFlow** and **Keras**, leveraging **natural language processing (NLP)** techniques to analyze over **10,000** pieces of user-generated content for mental health trends.
- Built and integrated the **Flask**-based backend with robust RESTful API endpoints, ensuring secure and efficient data handling for real-time analysis, achieving **85%** accuracy in sentiment detection.
